Views About Management

The Environment (Northern Ireland) Order 2002 Article 28(2)

A statement of Environment and Heritage Service's views about the management of the Tieveshilly Area of Special Scientific Interest ("the ASSI")

This statement represents the views of Environment and Heritage Service about the management of the ASSI for nature conservation. This statement sets out, in principle, our views on how the area's special conservation interest can be conserved and enhanced. Environment and Heritage Service has a duty to notify the owners and occupiers of the ASSI of its views about the management of the land.

Not all of the management principles will be equally appropriate to all parts of the ASSI and there may be other management activities, additional to our current views, which can be beneficial to the conservation and enhancement of the features of interest. It is also very important to recognise that management may need to change with time.

The management views set out below do not constitute consent for any operation or activity. The written consent of Environment and Heritage Service is still required before carrying out any operation or activity likely to damage the features of special interest (see the Schedule on page 2 of the attached Document B, for a list of these operations and activities). Environment and Heritage Service welcomes consultation with owners, occupiers and users of the ASSI to ensure that the management of this area maintains and enhances the features of interest, and to ensure that all necessary prior consents are obtained.

MANAGEMENT PRINCIPLES

The earth science interest at Tieveshilly occurs as rock outcrop within the disused lint pits, the quarries used for shale extraction and the adjoining stream. Environment and Heritage Service would like to encourage the maintenance of the ASSI and its earth science interest.

The geological series

Environment and Heritage Service would encourage the continued use of the site for agricultural activities. Provided no damaging activities are undertaken

without consent, as set out in the Schedule (page 2), the needs of owners, occupiers and the Department can be met. Specific objectives include:

Retain the geological series in an undamaged state.

Retain access to the geological series.

C McParland
Authorised Officer
